DETAILED ACTION

1. This Office Action is in response to the communication filed on January 08, 2007. Claims 1-4, 6, 9 and 13 are amended and none of the claims are cancelled or newly added. Therefore, claims 1-13 are pending in this application.
2. Applicant's arguments, filed on January 08, 2007, with respect to the rejection(s) of claim(s) 1-3 under 35 U.S.C. 102(b) as being anticipated by Arnold et al. (USPN: 3,787,818) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Chen et al. (USPN: 4,901,230).

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on January 08, 2007 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement has been considered by the examiner.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites the limitation "each configuration register" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen et al. (USPN: 4,901,230) hereinafter, Chen.

As per claim 1, Chen teaches a system comprising

- shared system registers (i.e. the shared registers, 200 in Fig. 2), each register including one or more bits defining an access protocol (i.e. the scalar and address information), and one or more bits representing data; and
- N processors (i.e. CPU 0 and CPU 1 in Fig. 2), $N \geq 2$, where n is an integer (i.e. n is 2 in Fig. 2), each accessing the registers (i.e. CPU 0 accessing shared registers via 143 and 140; and CPU 1 accessing shared registers via 144 and 140 as shown in Fig. 2) (e.g. see the abstract and Fig. 2).

As per claims 2 and 3, Chen teaches the claimed invention as described above and furthermore, Chen teaches that a single job may be run on multiple processors communicating through the shared registers and each processor handling certain tasks concurrently with the other (e.g. see Col. 22, lines 59+), therefore, each of the shared

registers has to keep track of access type for each processor in order to avoid the data corruption. In other words, having one or more bits, in the access protocol, that define a register access type for each N processors, wherein the access type being selected from a group that includes READ, READ/CLEAR, READ/SET, and READ/WRITE, is inherently embedded in the system taught by the Chen prior art.

Allowable Subject Matter

6. Claims 5-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 4 needs

7. Claim 4 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
